

INTEGRASPEC®

"The User Friendly ICF"

FEATURE PROJECT

Project: Cormier Residence

Boutouche, New Brunswick

Contractor: Lancor Concrete Contractors Ltd.

Moncton, New Brunswick

Design/Engineer: M and B Consultants

Moncton, New Brunswick

ICF Representative: Kelvin MacPhee Consultants

Halifax, Nova Scotia

Features: 6" IntegraSpec® wallsystem foundation with full main floor including garage and partial second floor walls, all finished with 8' ceiling heights.

Benefits: As the old saying goes, "Checkout what the contractor uses in his own home". Well, IntegraSpec® was this owner / contractor's choice. Mr. Cormier was looking for the best wallsystem available for his new home as well as for his future clients. Along with the wonderful benefits that IntegraSpec® offers the homeowner, IntegraSpec® affords Lancor Concrete Contractors a quick, easy alternative to traditional construction. Since the same system is being used from the footings to the roof trusses, general contractors can easily maintain forecasted and budgeted workflows.

"We live in the Northumberland Strait area where it feels like the winter wind can blow right through you. I wanted a quiet, draft free, energy efficient home for my family. IntegraSpec® is truly amazing! Our home is sound proof, comfortable, and safe with lower energy bills than anticipated."

- Gerry Cormier
