

INTEGRASPEC®

"The User Friendly ICF"

FEATURE PROJECT

Project: 3000 ft² Artists' Studio and Workshop Savannah, Georgia

Contractor/Distributor: Kam Contracting Inc. Savannah, Georgia

Features: IntegraSpec® wallsystem main floor and second floor
(Slab on Grade)

Benefits: IntegraSpec® wallsystem creates a sheltered work environment and forms a courtyard with a beautiful garden area. The owner insisted on IntegraSpec® for the security benefits with concrete walls reinforced with steel. As noted by the contractor, other features also influenced the owner's decision:

"The owner required a structure that would provide air quality suitable for creating works of art and structurally strong enough to withstand high wind forces associated with coastal areas. IntegraSpec®'s super insulated, steel reinforced, concrete wallsystem easily delivered these requirements and provided a very unique studio for the artist. IntegraSpec is truly the user friendly Insulated Concrete Form"
