

INTEGRASPEC[®]

"The User Friendly ICF"

FEATURE PROJECT

Project: Home Furniture Store

Pembroke, Ontario

Designer: Greer Galloway

Pembroke, Ontario

Contractor / Distributor: Thomas H Savage Ltd.

Pembroke, Ontario

Engineer: Arden Erel P.Eng.

Pembroke, Ontario

Features: 12,000 ft² commercial building with 16' high 6" IntegraSpec[®] wallsystem. Concrete floor heated with gas boiler radiant system. All walls and floor installed in less than four weeks.

Benefits: Heating bill for first year was \$1530 for full open concept building. This new store is three times larger than the owner's previous store, yet cost three times less to heat. IntegraSpec[®]'s wallsystem has lowered the owner's operating costs annually, increasing the owner's profitability each year.

"We had used an ICF for the foundation of our custom home and wanted the same energy performance and low maintenance costs for our new store. Construction was fast and accurate. We are very impressed with the simple drywall installation using IntegraSpec[®]'s wider strapping / studs. Our electricians were also impressed with the speed of electrical installation."

- Jim White
