

INTEGRASPEC[®]

"The User Friendly ICF"

FEATURE PROJECT

Project: Philippe Residence

Hammond, Ontario

General Contractor: Marc Philippe

Hammond, Ontario

ICF Distributor: EMM Group

Ottawa, Ontario

Features: IntegraSpec[®] wallsystem foundation and main floor level with vaulted gable ends using 6" concrete thickness. Garage also completed with IntegraSpec[®].

Benefits: This beautiful 1,500 ft² residence is home for a young family of four. The owners were looking for a safe and attractive home, but more importantly needed functionality. By using IntegraSpec[®], the lower level is a dry, healthy, and comfortable living space for the family. The main floor feels larger with vaulted ceilings, beautiful deep windows, and an overall open concept.

"There was no doubt that IntegraSpec[®] was the only wallsystem we would use for our new home. Our home is very easy to heat, mostly using our antique wood cook stove in the kitchen. We have large windows to enjoy the beautiful view throughout our home and still spent next to nothing on heating. My family loves our new house."

- Marc Philippe
