

INTEGRASPEC[®]

"The User Friendly ICF"

FEATURE PROJECT

Project: Roy Residence

Bourget, Ontario

Contractor: Neree Lavictoire Construction

Clarence Creek, Ontario

Engineer: Adjeleian Allen Rubelli Ltd.

Ottawa, Ontario

ICF Distributor / Installer: EMM Group

Ottawa, Ontario

Features: 6" IntegraSpec[®] wallsystem for the 8' finished foundation, 9' finished main floor level, and 15' gable end with vaulted ceiling. Insulated basement slab.

Benefits: The owners realized the value of using the IntegraSpec[®] wallsystem for their new 2000 ft² home, gaining maximum energy efficiency and comfort. The vaulted ceiling in the dining area was also constructed with the IntegraSpec[®] wallsystem, further increasing energy efficiency and structural integrity.

"We impressed everyone with the complete absence of waste generated by this project. Since IntegraSpec[®] is flippable and reversible, every panel we cut for the varying window openings was used elsewhere. Rebar placement for the monolithic bond beams over the window / door openings was fast and sensible."

- Marc Philippe
