

INTEGRASPEC[®]

"The User Friendly ICF"

FEATURE PROJECT

Project: Skerry Residence

Prospect Bay, Halifax, Nova Scotia

Contractor: Radiant Homes

Timberlea, Nova Scotia

ICF Representative: Kelvin MacPhee Consultants

Halifax, Nova Scotia

Features: IntegraSpec[®] wallsystem with 9' finished height lower level and main floor with 8.5' finished height second floor. Open concept design with 28'-7" high wall sections.

Benefits: *This unique home is located on four acres of beautiful waterfront property. The owner has owned this parcel of land for almost twenty years and recently constructed his dream home. As an architect, Mr. Skerry designed his new home to last. He insisted on IntegraSpec[®] for structural integrity and long term comfort. IntegraSpec[®] wallsystems eliminate the draughts common to waterfront living in conventionally built homes and provides amazing energy efficiency all year round.*

"After analyzing all ICFs, we chose IntegraSpec[®] for our own home. Form strength, transportability, flexibility, accuracy, and installed cost were primary comparables. As an architect, I found that even simple details were addressed by the design and engineering of IntegraSpec[®]. We highly recommend."

- Paul Skerry
