

**Five inch (5") web/spacer**

Mr. Michel Philippe, President, IntegraSpec ICF, is pleased with the successful design and production of IntegraSpec's new 5" web/spacer.  
 "This new product is the direct result of requests from the field."

**Available from all our IntegraSpec facilities March 10, 2006.**

A great deal of above grade North American construction is designed with 10" Concrete Masonry Units (CMUs). The combination of a 5" concrete cavity, 2.5" of IntegraSpec insulation on both the inside and the outside, matches the 10" thickness of this popular CMU.

In Commercial construction, hotel rooms are designed in widths to accommodate standard carpet widths etc. We can now compete for these projects without the interference of modification to standardized room dimensions.

With the introduction of an "odd" number web size we now have the ability to offer 4", 5", 6", 8", 9"(4" + 5" with "H" clip), 10", 11"(5" + 6"), 12", etc. concrete cavities.

The 5" web has been placed in our new IntegraSpec brochures and on-line IntegraSpec Product catalogue.
