

INTEGRASPEC[®]

"The User Friendly ICF"

CREATIVE APPLICATION

RADIUS AND ROUND WALLS

IntegraSpec[®] is easily used for small curved walls as well as tight radius walls.

Advantages:

- Independent panel design allows the installer to score and bend the panels to whatever shape required while maintaining the integrity of the wall with the when inserting the webs/spacers.

RADIUS AND HALF ROUND OPENINGS

IntegraSpec[®] is easily cut to create elliptical and half round openings. The same can be done for any elliptical and half round walls.

Advantage:

- Independent panel design allows the installer to safely and accurately cut the panels on a table saw. The exclusive IntegraHeaders are then bent to the same shape and secured to form a completely insulated opening.

CURVED RETAILING WALLS

IntegraSpec[®] is easily used for rounded retaining walls and maintains their structural support.

Advantages:

- Uses only one panel to product straight or rounded walls. Wall can be seamed for accurate dimensioning. Walls can be finished with the same material such as stucco as the adjacent home walls.
