

INTEGRASPEC[®]

"The User Friendly ICF"

FEATURE PROJECT

Project: Mountain Edge Resort

Owner: Tom Behrens

Designer: MTW Architects

ICF Contractor: Cretepavers Inc.

Newbury, New Hampshire

Newbury, New Hampshire

Buffalo, New York

Sunapee, New Hampshire

Features: This 69,000 ft² hotel combines the latest in reinforced concrete construction technology. The lower level was constructed with 8" and 10" concrete IntegraSpec[®] walls to offset ten feet of tensile backfill pressure. IntegraSpec[®] was continued on the upper levels including 6" and 8" concrete cores for exterior and interior demising walls.

Benefits: The Mountain Edge Resort was constructed during winter months in the Adirondacks. IntegraSpec[®]'s versatile product line assisted the contractors in accurately meeting all deadlines.

"IntegraSpec[®] ICF is the strongest and most versatile ICF. IntegraSpec[®]'s unique and patented ICF system eliminates form float, form compaction, form bulge, form failure, and form waste. These features combined with a full product line, including an insulated window/door buck system, leads to the best installed cost in the ICF market place."

- Andy Nichols
Cretepavers Inc.
